

# What do you expect from the workshop?

To get some feedback on a couple of new ideas that could become nice short papers

New project collaborators

To hear what science progress there has been since Pittsburgh!

A casual update from the work discussed at the Pittsburgh meeting!

Exchange ideas, improve the things I am doing, learn, and make collaborations

Is SH0ES correct when saying they are not affected by environment issues when measuring  $H_0$

An opportunity to push forward proposed projects from January

Learn a bit about host galaxies of SNe. Form collaborations and get to know new people. Come up with projects for the future.

Learn something more about host properties and how they affect cosmology.

# What do you expect from the workshop?

I expect to learn a lot about SNe cosmology, which could guide me during my PhD, and to meet collaborators and maybe friends!

Discussion with beer would help to make more new ideas!

How we can work together to prepare for LSST and Euclid.
